

For our young and growing company providing intelligent **prognostic solutions** for high-end **industrial asset management** applications world-wide, we are looking for a talented and versatile

Configuration Manager Working Student (m/f)

with strong background in mechanical and/or electrical engineering.

Responsibilities

- Drive the solution configuration process, using an established approach and a validated toolkit interfacing with industrial asset operations, condition monitoring and data analytics;
- Conduct configuration workshops with customers (asset managers, plant engineers, technical experts);
- Complete configuration templates, to be further processed by a computational solution;
- Secure the delivery of Cassantec's advanced industrial prognostic solution;
- Provide input for product development and technology teams to refine and upgrade the existing solution and its configuration tools and processes.

Profile

- Studying mechanical or electrical engineering – other relevant disciplines may also be considered;
- Relevant internships considered a plus;
- Excellent presentation and meeting facilitation skills;
- Demonstrated analytical rigor and technical curiosity, resourcefulness and creativity;
- Experience in data analytics considered a plus;
- Fluency in German and in English.

Location

The work location will be in Zurich, Switzerland or Berlin, Germany. A partial home office is possible. Short trips to the customers' locations are possible.

Benefits

Beyond a competitive compensation package, the candidate will enjoy a unique combination of professional opportunities, entrepreneurial spirit, technological excellence and industry exposure. The candidate will be able to personally and professionally grow with a young and striving company through technically challenging, diverse and highly international projects.

Cassantec is an independent provider of condition-based **Prognostic Solutions** for industrial asset management. Our unique and proprietary technology is based on methodological and computational advances in operations research, artificial intelligence and data mining. Our solutions enable asset operators to improve maintenance planning and to minimize downtime. Our customers are leading companies in the power, chemical, railway and other industries in North America and Europe.
